

Gefen GTB-HDMI-3DTV-BLK Gefen 1.4a HDMI,3D,IR Extender over CAT-5 330ft GTB-HDMI-3DTV-BLK

Extra Long Range Extender for HDMI, 3D TV and IR over one CAT-5 cable

The GefenToolBox Extender for HDMI 3DTV extends HDMI including multi-channel digital audio at resolutions of up to 1080p60 Full HD up to 330 feet (100 meters) away from any Hi Def source using one CAT-5 cable for the extension. This product also provides an IR back channel to control AV sources using the same CAT-5 cable extension. Using this channel with the optional RMT IR Extender, simply point an IR remote(s) of the A/V device towards the display to control Hi-Def sources as if they were located in the same room or proximity to the display.

How It Works

Locate the GefenToolBox Extender for HDMI 3DTV Sender unit next to a set-top box or Blu-ray player source. Use the HDMI cables supplied to connect the TV source to the Sender unit. The Receiver unit is located close to the display which can be up to 330 feet away from the Sender unit. The 3D TV display plugs into the back of the Receiver unit. Only one CAT-5 cable connects the Sender and the Receiver units to each other. Multi-channel digital audio is embedded into the HDMI signal (Dolby True HD / DTS Master Audio).

Features:

- Maximum Resolution: 1080p60
- Extends 3D TV up to 330 feet from the source to the display using one CAT5e cable
- Allows IR remote control of source devices from remote viewing location
