

# Atlona AT-HDMI-EQ HDMI BOOSTER (EQUALIZER) HDMI 1.3

## ATLONA HDMI BOOSTER. MODEL: AT-HDMI-EQ

Atlona HDMI booster is designed to correct standard problems with long hdmi cables that may appear and allow you to extend original cable for additional 15FT

*Note: The original cable can be up to 66ft*

1. If your cable is over 30ft and signal comes in and out
2. If you cable is over 20ft and signal is sparkly ( red and green sparkles )
3. If cable is over 30ft and you get no video or audio signal through HDMI

The AT-HDMI-EQ will perform best if placed at the end of the cable with the short extension cable to the display. The extension cable should not be more then 13ft.

If you application requires a longer extension, then we would strongly suggest our Pro Series Booster

### How to use:

Connect a cable end which is coming from the source to the " Source " input on the booster. Connect cable up to 13ft to the " Sink" output on the booster and the other end of the cable to the actual display ( Plasma, LCD, Projector or any other ). It might take 2 to 3 seconds to sink up with the signal.
